Nason A. Simpson 5.0 out of 5 stars For a nontechnical person, it may be a little difficult to understand the instructions, but once you look at the unit, it is very easy to understand how it should be connected. In the actual use of the device, it doesnt get any easier. Even for the most nontechsavy person I.E., my mother, nothing beats a big switch that says either A or B.

It is easy to understand, and provides tactile feedback a good affirmative click when you change inputs, great for someone that doesnt want to look at tiny little lights next to small buttons to tell what input is selected. The build quality has always been excellent. As I stated before, we use these units a lot at work, I have personally set up about 30 of them, they are always consistent, and well built. The case it powder coated metal, with good rubber feet. Overall, it is rock solid and super cheap.I have one DVI cable going to one monitor and the VGA cable going to this shared monitor via the monitor box. Now when working I can use my laptop with both monitors for the added desktop space. When i want to use my gaming PC, I switch over to B and the shared monitor is only on the PC now. My laptop is still using the other DVI monitor. Hopefully that all makes sense. It worked immediately out of the box. No additional cables provided, but I had those already from my monitors. I like this old school style switch box better than the pushbutton newer ones because it feels like the actual switch knob will last longer, even with daily swapping.I read numerous reviews on the button style switches, and decided I would avoid them. This works perfectly, and just does its thing. No issues with ghosting or resolution, but then Im only running XGA 1024x768 on the projector, so if you need super high resolutions, I cant say how this will do. The only issue is that for my setup selecting between two video card outputs on the same PC this box wont continue to tell Windows theres a valid monitor connected, so depending on your setup, Windows may renumber or rearrange your virtual desktop. I solved that with a ConnectPro EDID emulator, The setup I have two computers and one monitor took me less than 5 minutes I plugged the cables into the switch box and the two computers and I was done. No messing with different display settings or anythingit just works.

http://www.drupalitalia.org/node/69619

Its really the perfect unit and very well made. Highly recommend. I also highly recommend the Amazon cables for installationthey are professional quality at a reasonable price.Works perfectly and is heavy duty. This item will last me the rest of my life. Just have the right cables to plug in. I use it for my computer monitor between two computers. I can have both computers on, work on one and then click this switch as shown with great ease and there is my other computer on the screen instantly. So yes, I love it! Makes running two computers at the same time a breeze. I will order a

multi use junction box to run my keyboard on two computers and also to run my speakers from one computer to the other one as I switch them all over. This is actually quite enjoyable. Why run two computers. Because of my research and personal needs, I use one computer for my research and the other for internet use. It increases my security greatly along with my two security programs running all the time, even with computer off.For me, i was trying to find a way that we could connect our computer to our TV and switch the external input of the TV and throw the computer image up on the big screen with a flip of a SWITCH,.This set up also needs a separate auxiliary cable for the sound. Wouldnt be so hard to use an HDMI instead,.All that aside, it does as advertised and is a very sturdy product.As a teacher, I switch between my document reader and laptop a lot. I connect this to the projector and then the two other devices. LOVE. The only thing I didnt like about this is the color. It says that its a beige color and also shows that in the main image. However, its a really dull muted green color.Sorry, we failed to record your vote. Please try again We love it!Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Its on printed board Its on printed board, which is good but I could not get it to pass the EDID from the monitor to either computer. This allows the computer to know what monitor it is talking to and what resolutions are avaliable. Ports 4, 11,12,15 not soldered to the board. There is the problem. Neither is 9 but I dont think it does anything So I hard coded the monitors on my computers and it worked good for a week or two. Then the monitor started to get wavy screen. I removed the splitter and everything is ok. It looks like some of the solders are resolders. I spent so much time trying to get it to work, I had to open it to see what the problem was. So it looks like Red, Green and Blue as well as HSYNC and VSYNC are soldered to the board and grounds are all to one. A person can get it to work if they have some techie knowledge. Im assuming the wavy issue is a bad solder connection but Im tired of messing with it and I took it apart so Im not going to return it. I do like that it was a hard switch, I wish it would have worked.Sorry, we failed to record your vote. Please try again One is a desktop Windows with a dual output video card. The other is a tower with one video output running Linux. I have two monitors on my desk. So I connected one video output from the Windows computer to one

monitor. The other monitor is connected to the middle connector of this switch box. The video output from the Linux computer and the other video output from the Windows computer is connected to the switch. With this arrangement I can press one button on the switch box and have a two monitor output from the Windows PC or press the other button and have Windows on one monitor and Linux on the other.Sorry, we failed to record your vote. Please try again I'd have to toggle the buttons back and forth for a few minutes. Also the screen would be blue and have to keep pushing buttons back and to get clear picture.

I hope this will last for a while.Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Update July I had to unplug the item. I now have to reset computer and switch the plug inputs to get second computer to show on the screen. It worked well for some time but now not so much.Sorry, we failed to record your vote. Please try again Tried it with multiple different cables and no change.Sorry, we failed to record your vote. Please try again Love the button switch. I have had the knob swich ones, which the knobs have broken off.Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again. All four outputs are synchronized.These three inputs are auto switching. This kind of the HDMI Amplifier Switcher not only has the keypressswitching function, but also has the IR remote control and intelligent function.These three inputs are auto switching. This kind of the HDMI Amplifier Switcher not only has the keypressswitching function, but also has the IR remote control and intelligent function.The Splitter allows one HDMI devices to be split easily to two HDMI compatible monitors or projectors. The Splitter can also be placed at the end of a long HDMI cable to regenerate the HDMI signal.The Splitter can also be placed at the end of a long HDMI cable not included to regenerate the HDMI signal.This project came up with the need to bring together different products that are sometimes not easily accessible, at least at competitive prices. I'd have to toggle the buttons back and forth for a few minutes.

Also the screen would be blue and have to keep pushing buttons back and to get clear picture. I

hope this will last for a while. I run a Windows 7 laptop that simply would not handle the hires screen through the switch, but as soon as I took the switch out, I got a gorgeous screen. I swapped cables all around to rule out cabling. But, the other computer on the switch was a Lenovo laptop running Windows 10 with its own highres screen and it handled the new monitor just fine through the switch it didnt handle the old lowres thing very well. Gave up on the switch. Update July I had to unplug the item. I now have to reset computer and switch the plug inputs to get second computer to show on the screen. It worked well for some time but now not so much. Please try again.In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading.
