Quick Ship may not apply to multiple quantities of the same product. Then it will deactivate. If this is

not the case, door lock fault or main board fault. If not then check the inlet solenoid. If yes than check the board. This typically an issue associated with just the filter in the pump being obstructed. It will push in a tab, it doesn't take much force. Rotate the hole clockwise to 6 o'clock and it should come free, the edges are extremely sharp so be careful. Unscrew slowly so you don't get flooded, until it is unscrewed all the way out. There is potential for a lot of water. Even if the washer looks empty. That is how you gain access to and clear the filter on your Bosch washer. If this answered your question, awesome. Hope you found this helpful. If so please take a moment to write a short testimony and leave a rating. Thank you for choosing FixYa, good luck. Regards, Macmarkus Best to you. The machine will go through the entire wash cycle from wash/rinse/spin/finish but does not spin. I tried a separate spin cycle and nothing happened. God bless your efforts. It suddenly worked for a while. Now won't spin and checked drain, it is clean. The drain pump works fine. Such as, it didn't drain all the water, the door is not locking, it is unbalanced, the pressure switch does not operate or there is a hole in the pressure switch tube. The drain pump has a foreign object stuck in the impeller. Just a few to check. Any ideas on how to fix this? If you look closely at the washer at the bottom you will see a groove. That groove is where that spring will need to end up otherwise the whole thing will keep popping off. How I install is I use a 90 degree pick tool. I work the edge of the seal with the metal ring and making sure it lines up with the groove. Once you get that completed I push down on the spring to make sure that it is in there. If it is not it takes one door opening to make it fall all apart and you have to start over. Answer questions, earn points and help others. Hold times are long.
