

INTRODUCTION

How to Use This Manual

This manual is divided into 18 sections. The first page of each section is marked with a black tab that lines up with one of the thumb index tabs on this page and back cover. You can quickly find the first page of each section without looking through a full table of contents. The symbols printed at the top corner of each page can also be used as a quick reference system.

Each section includes:

1. A table of contents, or an exploded view index showing:
 - Parts disassembly sequence.
 - Bolt torques and thread sizes.
 - Page references to descriptions in text.
2. Disassembly/assembly procedures and tools.
3. Inspection.
4. Testing/troubleshooting.
5. Repair.
6. Adjustments.

Special Information

WARNING: Indicates a strong possibility of severe personal injury or loss of life if instructions are not followed.

CAUTION: Indicates a possibility of personal injury or equipment damage if instructions are not followed.

NOTE: Gives helpful information.

CAUTION: Detailed descriptions of standard workshop procedures, safety principles and service operations are not included. Please note that this manual does contain warnings and cautions against some specific service methods which could cause PERSONAL INJURY, or could damage a vehicle or make it unsafe. Please understand that these warnings cannot cover all conceivable ways in which some, whether or not recommended by HONDA, might be done, or of the possible hazardous consequences of such conceivable ways. No one should investigate all such ways. Anyone using service procedures or tools, whether or not recommended by HONDA, must satisfy himself thoroughly that neither personal safety nor vehicle safety will be jeopardized.

All information contained in this manual is based on the latest product information available at the time of printing. We reserve the right to make changes at any time without notice. No part of this publication may be reproduced, stored in retrieval system, or transmitted, in any form or by any means, electronic, mechanical, photocopying, recording, or otherwise, without the prior written permission of the publisher. This includes text, figures and tables.

It was replaced by the Honda CRX del Sol for the 1992 model year. Redesignated in 1988 and produced to 1991, the CRX was popular for its performance, nimble handling, and good fuel economy. Honda's 1992 CRX del Sol was marketed as a CRX in some markets. In North America, the CRX was marketed in two versions: economy and sport. The economy model used a new aluminum 1.

3 liter CVCC engine. The sport model featured an aluminum 1.5 liter four cylinder with three valves per cylinder and available with a 5 speed manual or 3 speed automatic. In spring 1985, Honda introduced an Si Sports, injected model featuring a more powerful 1.5 liter SOHC PGMFI engine. The Si model included a power sunroof, standard dual remote exterior mirrors, rear wiper, 13 inch alloy wheels and an Si exclusive ducktail spoiler for the hatch. The Si received body color matched lower cladding, a revised rear spoiler, new bumper covers and 14 inch alloy wheels. The interior was upgraded and added a center console with cassette tape storage. 1987 was virtually unchanged from 1986 and would be the final year of the first generation CRX. At its introduction, the CRX was available in Japan through Honda Verno dealership sales channels, and accompanied the Vigor, the Quint, and the Prelude. Though similar versions of the same engine, the Japanese Si engine was stamped ZC, while the European engine was stamped ZC1. Japanese buyers took advantage of the largest, 1.5 L, engine while still paying the same amount of annual road tax. Phase Two of the project was to have Racing Beat install two 1.8 liter engines with automatic transmissions from the Honda Accord into Synchronicity. Many of these were fitted with fuel injection as standard. Additionally, some of these design changes were added to the concurrent non-VTEC models. Relatively common in Japan, these are sought after models in other markets. The VTEC variable valve timing and lift electronic control engine provided increased power at high RPMs while still allowing low fuel consumption and better idling at low RPMs. The B16A produced 150 PS 110 kW; 148 hp in the European 1.6iVT model where the engine bore the designation B16A1 and 160 PS 118 kW; 158 hp in the JDM SiR model. The CRX was the second car to receive a VTEC engine, shortly after the Integra, although the CRX was more popular and common.

A CRX equipped with the ZC engine had a hood with a bump on one side which offered the additional necessary clearance. Cars equipped with a B16A engine came with a hood that was raised across most of the engine bay to offer additional overall clearance for the taller engine. This panel is heavily stippled black. The Si model came with a power sliding sunroof and 14 inch alloy wheels. Underneath, the Si model was equipped with a rear antisway bar along with variable ratio rack and pinion steering. The 9091 Si models had 4 wheel disc brakes. Four color options were available on the CRX and CRX Si and two color options were available for the CRX HF. Revision due to side impact collision changes. The del Sol was also badged as the CRX del Sol in some markets,

and known as simply the CRX in others. Production of the del Sol ended in 1997, and thus, the CRX line was retired. It also made Car and Driver magazines Ten Best list for 1985. The redesigned CRX was on Car and Driver's Ten Best list for 1988. Commercials for the CRX claimed it could reach 60 miles per gallon fuel economy; according to Horowitz's test, it bested that figure, reaching 65 miles per gallon, and passed the test. These models can be identified by the mounting position of the safety belts. If the belt is mounted in the door, the beams are present. Today, the car is popular for use in drag, autocross and road racing events. By using this site, you agree to the Terms of Use and Privacy Policy.
